

Computer Based Training (CBT) Courses from NETg

All of our "Learn Now" CBT courses from Thomson NETg have been developed in cooperation with the respective manufacturers and governing bodies. NETg are an industry leader in the field of computer based training. All courses can be installed either completely onto a Windows PC hard drive, or configured to run from the CD-Rom. They come on one or more CD-ROMs depending upon the content and bundling of the course. A multi-media PC with sound is required to run the courses.

The CBT courses include Skill Builder with built-in assessment exams, simulation, interaction and unique course features that offer an engaging and personalised learning experience. A prescriptive pre-assessment allows learners to filter out parts of a course that they already know. Books and videos are NOT included since all required information is included on the CD-ROMs. If you wish to purchase books to accompany the CD-ROMs at additional cost, please use the link to "Books" on our website.

Many of the courses are designed to prepare individuals for specific examinations. However, it is not necessary for individuals to take the exams unless they wish to obtain the relevant certification. Therefore our prices do not include examination fees, which would need to be paid to a local test centre when ready. We are always happy to assist in locating the nearest test centre and helping to arrange for examinations. Courses are delivered free in the UK by Royal Mail Special Delivery.

We can provide IT courses available for the following subject & certification areas:

IT COURSE INDEX			
Adobe	CompTIA: A+, iNET+, Network+, Server+, Linux+ & Security+		
CIW – Certified Internet Webmaster	C & C++ Programming	ECDL	
Cisco: CCDA, CCDP, CCIE, CCNA, CCNP & CCSP	eCommerce		
HTML	IBM	Internet	Java
Linux	Lotus Notes	Lotus Domino	Macromedia
Microsoft:	Office Specialist, MS Office 2000, XP & 2003, MCAD, MCDBA, MCSA, MCSD, MCSE & .NET Windows 2000, XP, Server 2003, MS Security, MS Exchange, SQL Server

Thomson NETg “Learn Now” CBT Courses

About the NETg Range of Computer Based Multi-Media Training Courses

NETg offers you more than 600 quality technology-based courses to meet all your IT and business training requirements. Covering a broad variety of skills our excellent course content, together with innovative course design and a choice of delivery systems, assures truly effective anytime, anywhere learning.

Learn Faster with NETg's Precision Learning' Track

NETg's unique pre-assessment engine automatically links what the learner currently knows to the course content, allowing them to focus only on the areas that need to be learned. This can significantly reduce the amount of time taken to study the material.

More than 30 studies compiled to date conclude that interactive technologies reduce learning time by up to 50%. You will learn what you need to know and be able to apply that knowledge sooner and more efficiently.

Measure Results

NETg's Mastery Assessment tool determines how far you have progressed in skill and knowledge acquisition and points you to the items you need to review, based on assessment results. The Mastery assessment and review list are particularly helpful to learners preparing for certification exams.

Remember More with Simulation, Interaction and Audio

Structured simulations give the opportunity for exercise and practice so individuals remember more of what they've learnt (without using the 'live' application). Simulation and interaction engages the learner's attention, to reinforce and exercise skills being taught, and provides feedback on the learner's grasp of a skill. This 'learning by doing' model is far more effective than the traditional true/false, multiple choice approach.

With the addition of audio the learning retention is further increased, the more senses employed in the learning process the higher the retention. All of this means that retraining time can be vastly reduced and learners will find it much easier to transfer the skills that they have learnt to the workplace.

Pay Less / Flexible Course Delivery

Available at home or on-site in the office, you can train when you want, where you want. For a fraction of the costs of an instructor-led class, you will benefit from reduced travel, reduced expenses and reduced training time. For businesses the cost per learner declines as the number of users increase. Training managers acquire a better-trained workforce, with less time off the job and fewer demands on the education budget.

A Complimentary Study Tool

NETg training partners encourage the use of technology-based training not only as a standalone training method but also as pre-course study material and as a revision tool after a traditional classroom course has taken place. Courses can also be utilised 'Just In Time' whilst working, where a quick update for performing a particular skill can be quickly referenced real-time.

Industry partnerships

NETg's strong partnerships with industry leaders enable them to work together to produce courses that are constantly in line with their latest products. NETg have access to beta versions of partner software and can quickly bring new courses to market. All courses are tightly mapped to the partner certification programmes and are reviewed and edited by them to ensure complete accuracy and relevance. So when you have finished a NETg course you will be more than ready to apply this knowledge to prepare for a certification exam or simply to get on with the job.

NETg's industry leading partners include the following:

Microsoft	Oracle	Novell	Cisco
